

Machine behind the Stream service is your on-demand broadcasting network that allows you to add as many server resources that are needed for your next big event.

Streaming BASE's simple web service interface allows you to custom configure the server load and hard drive storage capacity with minimal effort. It provides you with complete control of your server resources during Streaming BASE broadcasts or streaming collaboration events.

Machine behind the Stream reduces the time required to obtain and configure a large scale network to hours not days. This allows you to quickly scale capacity, both up and down, as your broadcasting requirements change.

Machine behind the Stream changes the economics of broadcasting by allowing you to pay only for the broadcasting network and storage services that you actually use.

FUNCTIONALITY

Machine Behind the Stream presents a true virtual broadcasting environment, allowing you to

1. Hold LIVE broadcasting events,
2. Host Video On Demand applications,
3. Host intensive Streaming Email applications,
4. Provision as many or few Broadcasting servers as you wish.

With Streaming BASE, you simply:

- Fill out the order form on www.streamingbase.com
- Machine behind the Stream provides in the tools that make broadcasting simple, reliable and fast repository to store your recorded content.
- Pay for the broadcasting plan based on bandwidth and storage you actually need.

GETTING STARTED

The best way to understand Machine Behind the Stream is to sign up for a FREE trial and in just a few minutes, you will be able to log into your own Streaming BASE account and start broadcasting!

HIGHLIGHTS

FLEXIBLE

Machine behind the Stream enables you to increase or decrease capacity within hours, not days or weeks. You can commission your broadcasting server farm from one, hundreds or even thousands of broadcasting servers simultaneously. Of course, because this is all controlled Streaming BASE Load Balancing solutions so your broadcast can be scaled up and down depending on your needs.

RELIABLE

Machine behind the Stream offers a highly reliable environment. Everything is backed up daily. The service runs within our proven network infrastructure and datacenters.

SECURE

Machine behind the Stream provides web service interfaces to control network security. You define administrative user groups and their desired accessibility.

INEXPENSIVE

With Machine behind the Stream you pay a very low rate for the compute capacity you actually consume. Compare this with the significant up-front expenditures traditionally required to purchase and maintain hardware, either in-house or hosted. This frees you from many of the complexities of capacity planning, transforms what are commonly large fixed costs into much smaller variable costs, and removes the need to overbuy "safety net" capacity to handle periodic traffic spikes.

PAYING FOR WHAT YOU USE

You will be charged a one time Streaming BASE setup fee and a predetermined block of data traffic and storage to be used for each broadcast. You will be responsible for hours consumed and for each GB transferred to and from our datacenters.
